Mesh & Intents

Bring liquidity into Bitcoin Cash.
Put it to work.

champrotocol.vercel.app/mesh

Why we built Mesh

Selling a CashToken should be simple. But when liquidity is thin, one trade can move the price and the next trader gets a worse quote.

On BCH, each output can hold one token category. Mesh pools keep the reserve in one output and route payment to another. The same reserve can quote several markets.

Why traders and LPs use Mesh

Better routes for traders
Direct CashToken trades and two hops

One reserve can quote several markets

Mirror pools can fund the reverse quote

BCH Usage

Intents match outside capital with native BCH and CashTokens.
Mesh covenants enforce the payout. XO shows the limit-order terms before you sign.

CROSS-CHAIN CAPITAL

Intents route into BCH and CashTokens

Mesh liquidity settles on BCH

XO makes order terms inspectable

The Vision for Mesh

Make BCH markets easier to enter and deeper to trade.

Near term: publish a full XO settlement and expand wallet review.

Long term: grow with liquidity providers and BCH wallets.

THA YOU!
